RELEASE DRAFT

Qeemat

v0.6.0-alpha

Since v0.5.5-alpha

Find products across stores, track what matters and understand how prices change over time.

01 DISCOVER

A fresh For You home and richer departments.

02 ORGANIZE

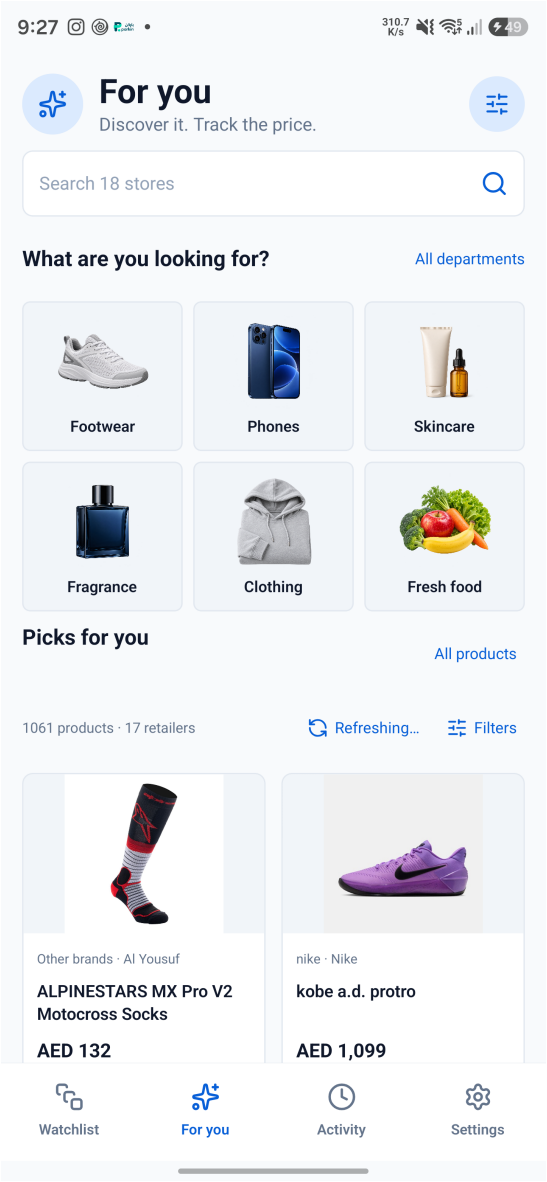

Folders, filters and bulk watchlist actions.

03 TRACK

Local price insights and more useful alerts.

04 STAY CURRENT

A notice when a newer Qeemat release is ready.

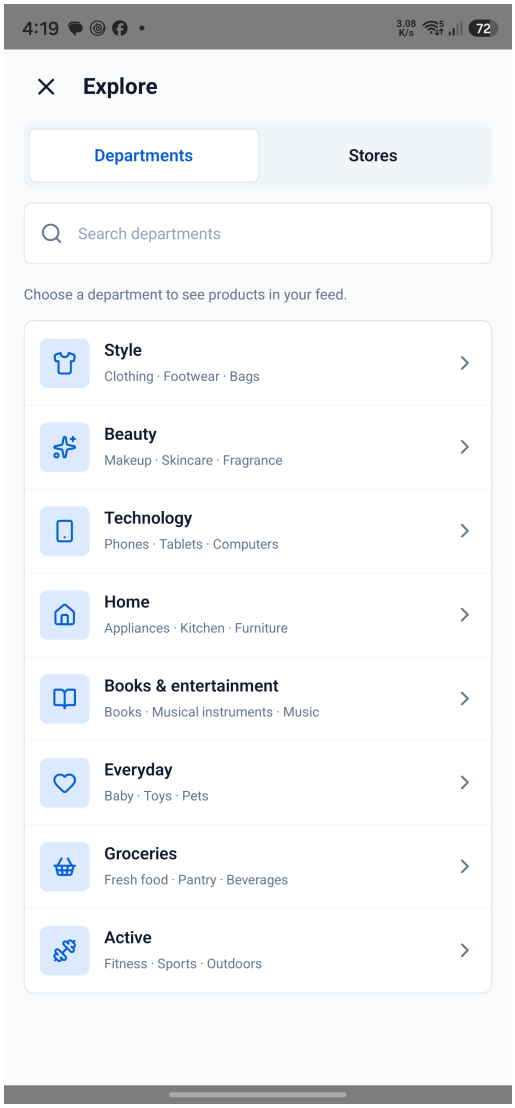

Changes merged into dev through ead2680. Version 0.6.0-alpha has not yet been published.

DISCOVER

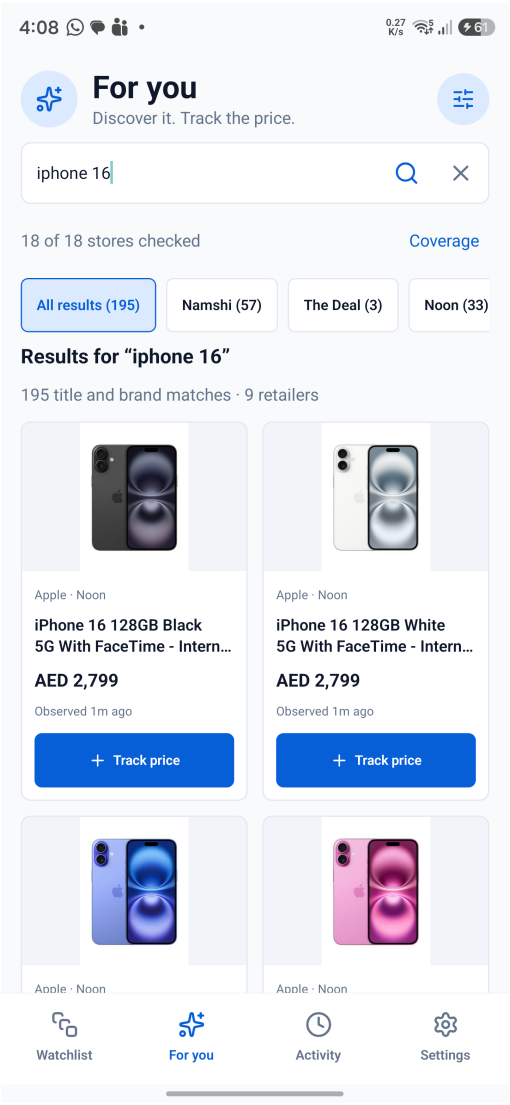

A better place to start

Browse by interest or search across retailers without leaving For You.

Choose optional interests, favourite brands and separate budgets. Browse departments, then track a product after its page and available options are checked.

Explore departments
Find clothing, skincare, technology, groceries and more.

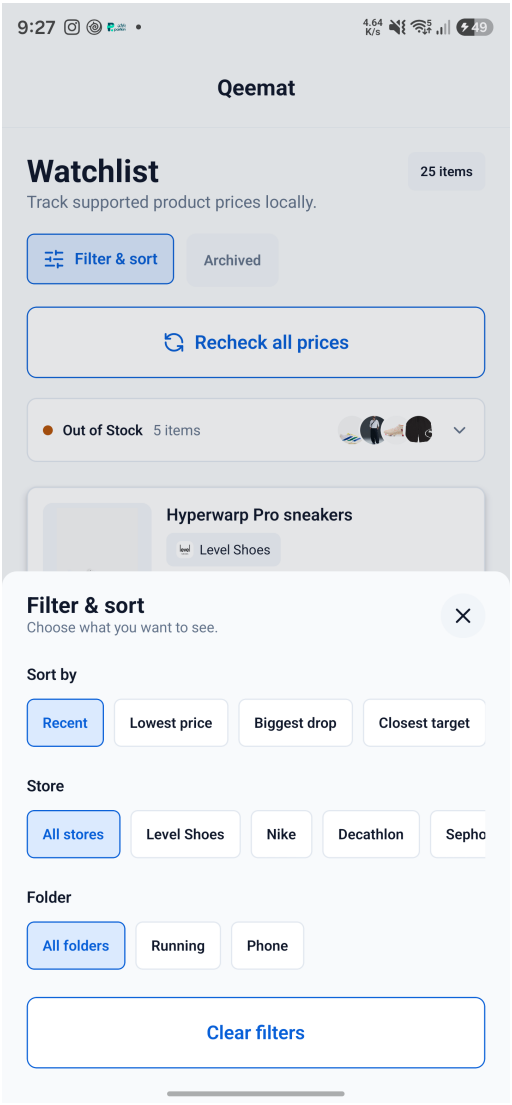

Search across stores
Results appear as retailers respond; filters show stores with matches.

WATCHLIST

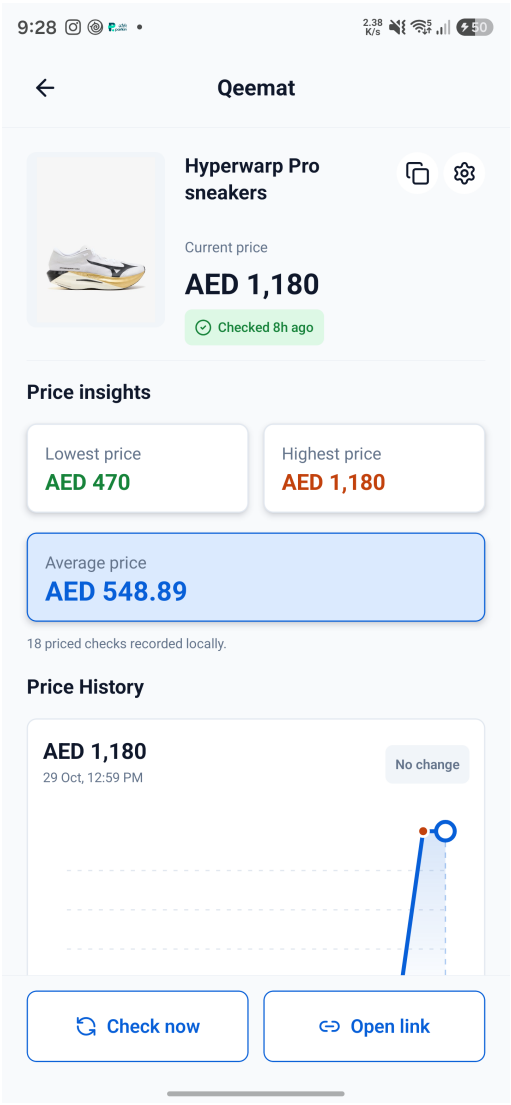

A clearer view of your products

Find an item quickly and understand its locally recorded price history.

Organize trackers into folders, filter and sort the list, or select several items to move, pause, archive or delete. Product details show local low, high and average prices.

Filter and sort
Narrow the watchlist by folder or store and choose a useful order.

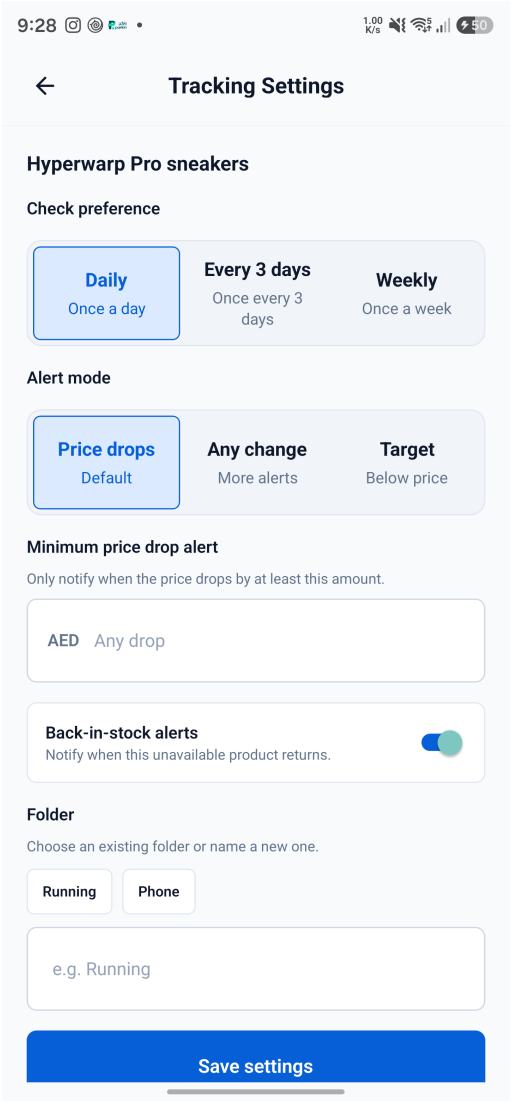

Price insights
Tap the chart to inspect recorded checks; history is local to this device.

ALERTS

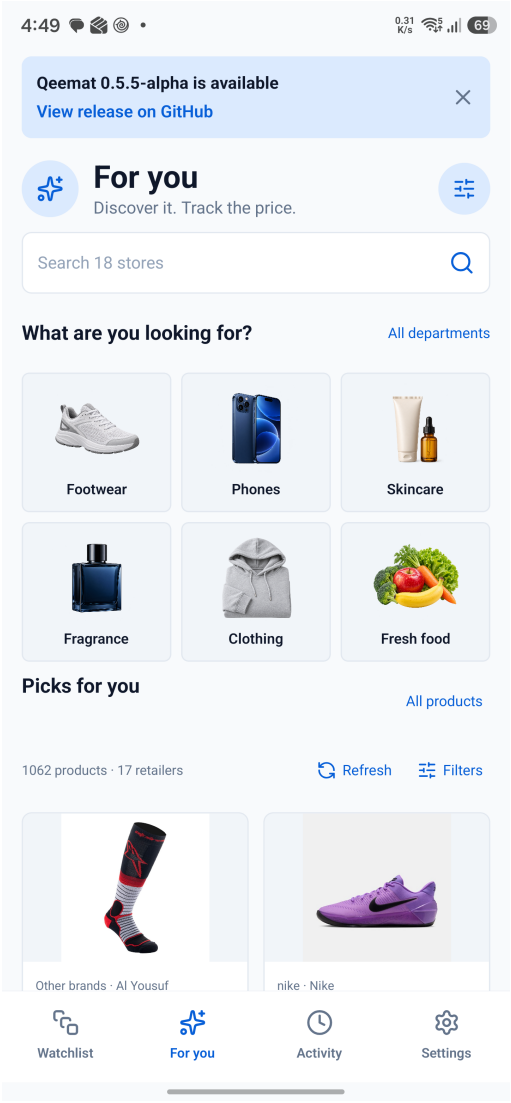

Updates that are useful

Choose tracking alerts and learn when a newer app version is available.

Set a minimum price drop and back-in-stock alerts per tracker. Qeemat checks GitHub for app updates and can notify once for each newer version.

Tracking settings
Shown with an unsaved example selection.

App update notice
Test capture using an older version; it does not indicate a new release is available today.

COVERAGE AND CONTEXT

More shops, with clear limits

Availability varies by retailer, query, location and time.

MORE RETAILERS

Carrefour UAE, Salomon GCC and The Deal UAE have joined supported product tracking.

BROADER DISCOVERY

56 independent interests and 4,517 mapped listing pages across 19 retailer sources. A mapped page may still fail or be blocked.

SEARCH COVERAGE

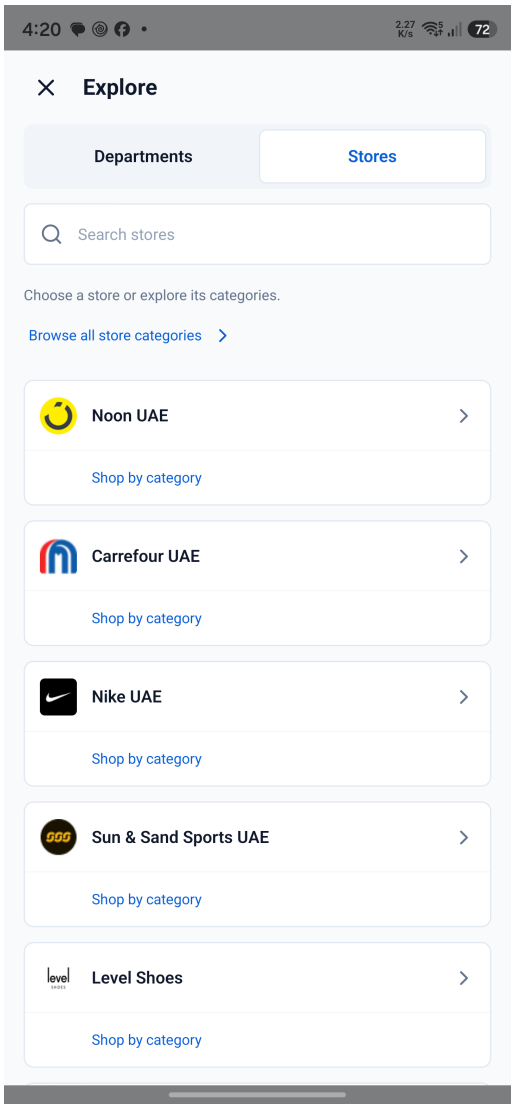

Search is implemented for 18 sources. Sharaf DG search is excluded; some stores return partial results.

LOCAL BY DESIGN

Preferences, watchlists, history and discovery cache remain on the device. Only tracked products receive background price checks.

KEEP IN MIND

Refresh updates the current discovery view. App-update checks run about every 48 hours; Android and notification permissions can delay them.

Screenshots are from Android builds captured 28-29 Oct 2026. Prices, products and counts are examples and may have changed. The update banner is a test.
